SITUATION SUMMARY

California Department of Public Health Zika Virus Update

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika Virus Disease and Meningococcal Disease Outbreak. This situation report reflects only Zika Virus activities.

The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

- The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses are timely and accurate.
- CDPH and EMSA Duty Officer Programs are monitoring the Zika virus disease outbreak after hours and remain in communication with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordinator (MHOAC) Programs throughout California.

Zika Virus

- As of Friday, 10/28/16, there have been 353 travel-associated Zika virus infections in California.
- This number is an increase from 347 cases (updated number from 348) reported in the last operational period.
- CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

	High Threat
	Moderate Threat
	Slight Threat
	No Discernible Threat

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

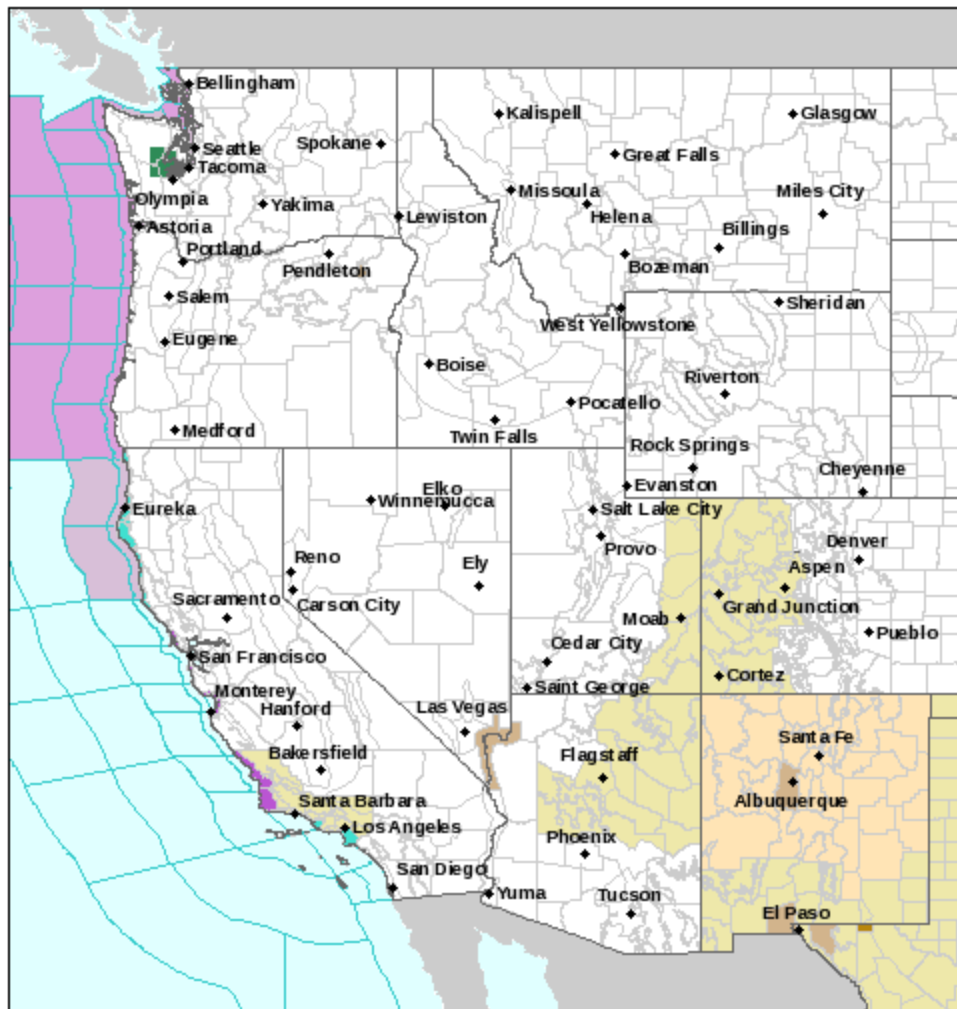

A high pressure ridge over the region this morning will move off to the east this afternoon. Partly cloudy and mild weather is expected through midday today. A weak front approaching the coast will cause high clouds and southerly winds to increase across the region this afternoon. Southerly gusts will reach 25-35 mph in wind-prone areas in the north this afternoon. The front will move into far northwest California this evening with light rain, but it will stall there and dissipate early Thursday. Fair, mild and breezy weather can be expected Thursday through Saturday. A stronger frontal system will move onshore late Saturday with moderate to heavy rain, and move fairly quickly across the region, exiting by Sunday evening. Snow levels will be 5000-6000 feet. High pressure will follow early next week, but more wet weather systems are expected to follow. Temperatures will warm to around seasonal normals or slightly above late this week, to around 70 for the warmest inland areas.

SOUTHERN CALIFORNIA

A weak low pressure area over southwestern Arizona along with high pressure aloft will produce sunny and warmer weather the next few days. At the current time, northerly pressure gradients are producing gusty winds north winds of 20-30 mph across northern Los Angeles County eastward into the Cajon Pass and San Bernardino National Forest. Expect this area as well as the Owens Valley and the Colorado River Valley to see gusty north winds throughout the day. The north winds will gradually shift to the northeast toward evening which will cause winds over the Santa Clarita Valley, Ventura County and Santa Ana Canyon to increase to 20-30 mph by daybreak Thursday. Temperatures will be 10-15 degrees warmer over Southern California today with valley highs close to 80 degrees. Further warming can be expected Thursday with lower 90s possible across Southern California. Minimum relative humidity (RH) will drop toward the 10-15 percent range over a few areas by Thursday afternoon. Meanwhile, further north, the San Joaquin Valley will see a return of night through morning low clouds into the weekend. The low pressure will drift eastward by Saturday, allowing a weak trough to enter the region. Isolated showers may occur over Monterey County Saturday night and Sunday, but no significant rain is expected through the period. Temperatures this weekend will be cooler over Southern California with a likely return of night and morning coastal stratus. Slightly warmer weather may return next Monday.
